

SONIC SOLUTIONS[®] *Algae Control Without Chemicals!*

SOLAR POWER SYSTEM

We've harnessed the very power source that algae need to grow—the sun—to power the device that controls them. Designed and engineered specifically to work with any of our 24-volt models, our state-of-the-art solar power system will provide five days and nights of continuous power without sunlight. Batteries are included! Perfect for remote sites that lack a power supply, the SonicSolutions[®] Solar Power System eliminates the need for costly power installations. Get the power you need whenever and wherever you need it and harness the sun to help control your algae problem!

Features & Benefits

- **Perfect for remote site** since it avoids running AC power to isolated sites —Low initial investment
- **Commercial grade AGM batteries** included for highest reliability and longest life
- **Batteries provide 5 days & nights of power**, allowing for rainy/cloudy weather operation
- **Microprocessor regulated charging levels** ensuring fastest charging and longest battery life
- **Automatic low voltage cut back**, protects batteries from deep discharge battery damage or failure

- **Includes** solar panel, control box, wiring, pole, mounting brackets and two batteries
- **Secure Battery Box located above ground**, helps ensure that flooding or animals will not damage the batteries
- **Custom engineered and designed** for use with SonicSolutions[®] Algae Control units with SonicSolutions[®] warranty
- **Built to last**, panels certified to withstand a hail storm with winds up to 120 MPH
- **Systems** are sized for specific locations
- **Designed and built in the USA**

A SonicSolutions[®] solar panel at Indian Wells Golf Club.

“All of us at the Indian Wells Golf Club are very pleased with our SonicSolutions Algae Control devices. Although we were initially skeptical that the devices would work, we have not needed to use any chemicals for algae control in our ponds—even through the hottest months of the summer! Today, we have 21 SonicSolutions units, including 12 solar powered models, controlling algae and helping preserve the beauty of our golf course in an environmentally responsible way.
