

Case Study Testimonial

Key West Golf Club

Where: Irrigation pond, 2 acres

Installed: 2012

Algae: Kirchneriella, Microcystis

Pond also contained Cladophora, an algae not controlled by ultrasound

Problem: “Our irrigation pond was constantly covered in algae even though we had a company come monthly to treat the ponds. I would also treat the ponds the weeks the company was not there. We had little to no success in our irrigation pond until we installed a sonar from SonicSolutions.”

Before

Problem Solved!

“The two ponds we have sonar in receive little to no treatment at all while we still use copper sulphate regularly in the other ponds!”

After

~ Eric Harchuska, Superintendent, Key West Golf Club
